

SPARK MICROGRANTS

Spark's Theory of Change

Spark's Facilitated Collective Action Process (FCAP) increases livelihoods and social cohesion across villages facing rural poverty. Families see a 2x increase in meals eaten per day, and women step into leadership for the first time. All of which, increase social cohesion and improve livelihoods.

increase in families eating more than one meal per day over the course of the FCAP

increase in household animal assets over the course of the FCAP

higher livestock value in FCAP households than in non-FCAP households

increase in household meeting attendance over the course of the FCAP

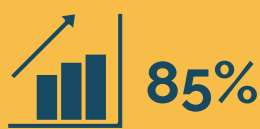

of elected female leadership are first time leaders thanks to the FCAP

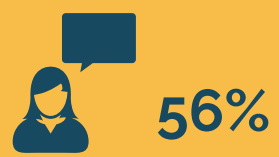

of FCAP communities more likely to resolve conflicts than non-FCAP communities

Project Multiplier

Profit Generating Projects

Female Participation

For every one project stimulated by the FCAP, a community launches another, showing a 2x impact multiplier. 85% of these projects are profit-generating and families see a 20-80% increase in household assets. Nearly 60% of these projects are agricultural or livestock focused. Across the board, 85% of villages continue to meet regularly. Spark's process isn't just local, it's inclusive: 56% of ideas come from women, 46% of democratically elected leaders are women, and 100% of villages have youth in leadership.
